

SAFE & SUITABLE FLOORING

Rubber tiles
Rubber edges

Product
INFORMATION

WE'VE GOT YOU COVERED

By producing rubber tiles, Elastful has joined worldwide efforts to reduce CO2 emissions and give a second life to already extracted raw materials. We produce with cold pressing technology, which makes children's games and sports training even safer and everyday life more comfortable.

Millions of tons of used tires are thrown into the trash every year. Some of the tires do not end up in the landfill, but we turn them into a safe, comfortable and environmentally friendly flooring.

We stand behind what we do, and we are constantly working to improve our products to ensure that we deliver the best possible value to our customers.

COLD PRESS QUALITY

More flexible, durable and aesthetic

Elastful has joined the European Green Course, which envisages the recycling of as many products as possible for reuse. This means not only less waste and damage to nature in the process of extracting resources, but also lower costs of finished products for their users. We produce with cold pressing technology, which makes our products even more flexible, durable and aesthetic.

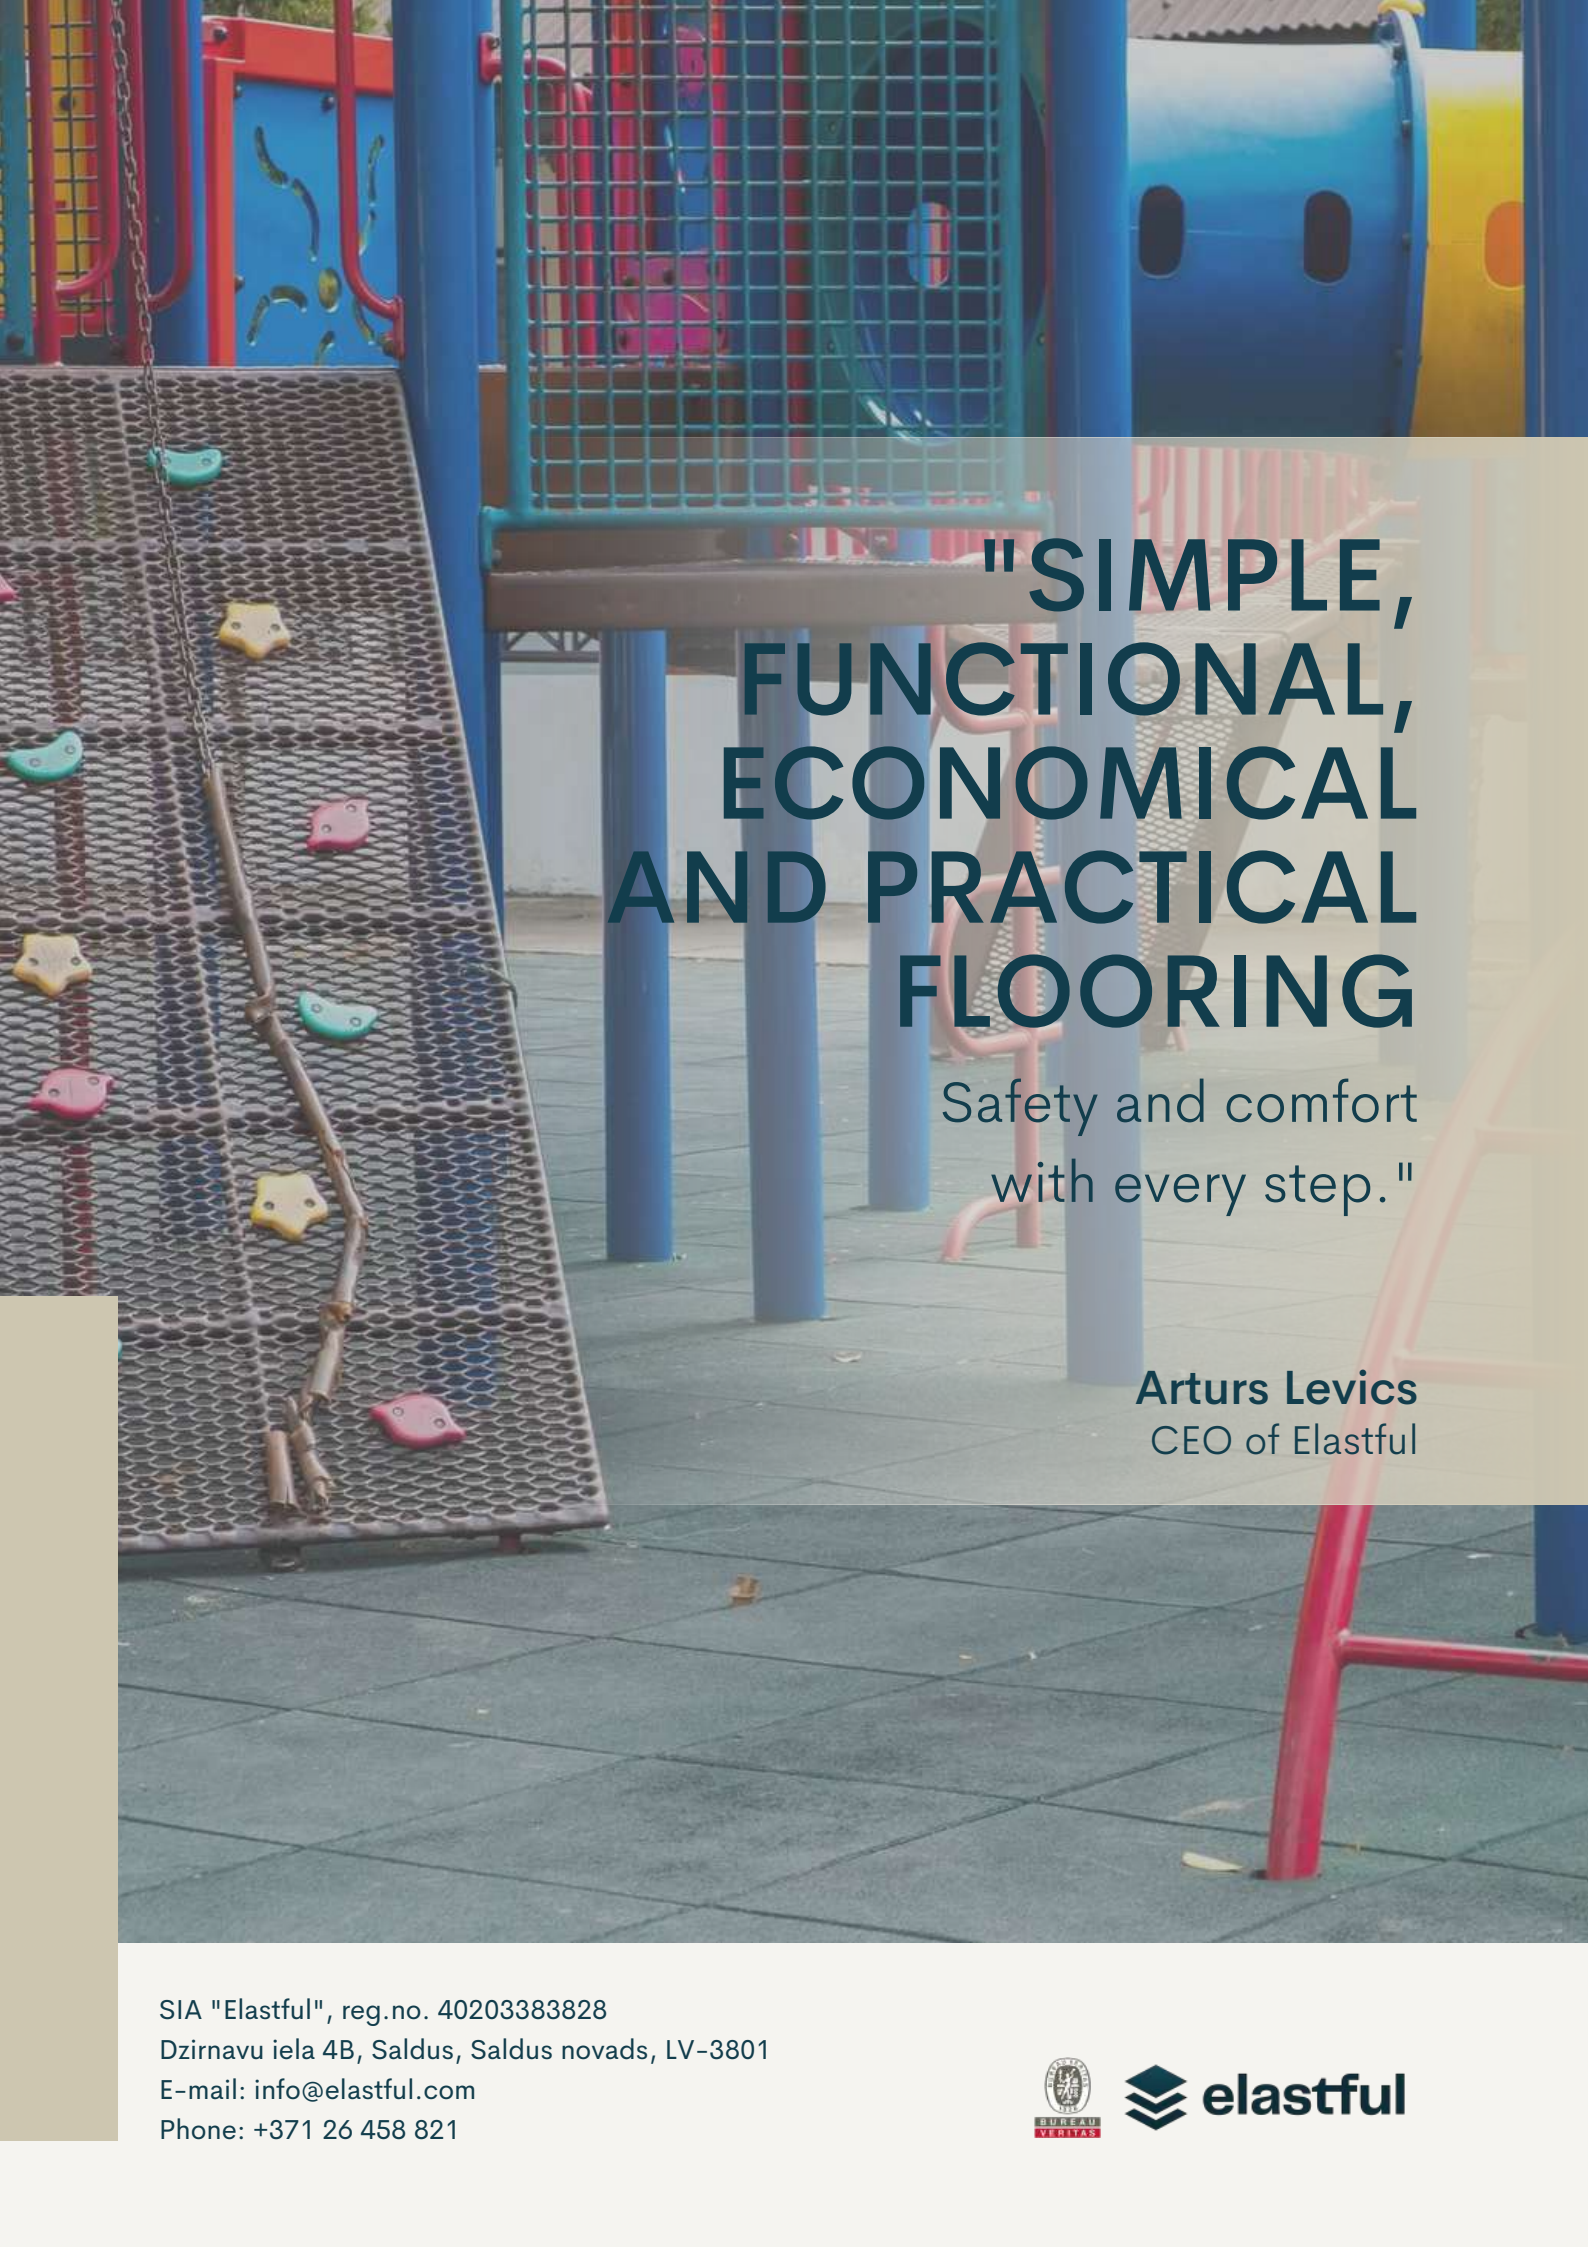

In the production process, when all the raw materials are thoroughly mixed, assembled in molds and pressed, the rubber tiles in a pressed state are placed in a drying chamber for 4 to 6 hours. When exposed to low temperature, the sauna effect, the pores of the rubber granules open, where the glue is absorbed. This process later has a positive effect on the flexibility and density of the resulting rubber tile, its durability and service life. When produced with cold pressing technology, the obtained rubber tiles have no smell and do not decompose under the influence of the environment.

OUR PRODUCTS

Safe and suitable

Rubber tiles produced by Elastful are a long-lasting, safe and economical flooring solution for outdoor and indoor infrastructure objects with a high risk factor for injury. Rubber tiles are an aesthetic floor covering with excellent sound absorption and water permeability.

Our rubber edging provides excellent stability of the rubber tile area and reduces the risk of serious injuries near the edges of the area.

The rubber tiles offered by Elastful have an elastic structure that provides cushioning and protects against dangerous falls. Rubber tiles provide good surface adhesion in any weather and are an aesthetic floor covering with very wide possibilities of use. Rubber tiles are an excellent covering solution for playgrounds, gyms, balconies and terraces, garages, basements, horse stables and industrial use.

EASY INSTALLATION AND DISASSEMBLY

LOW LIFE CYCLE COST

EASY TO MAINTAIN

EXCELLENT WATER PERMEABILITY

NON-SLIP SURFACE EVEN IN WET CONDITIONS

SOUND ABSORBING PROPERTIES

CERTIFICATE OF COMPLIANCE (EN 1177:2018)

TECHNICAL INFORMATION

Rubber tile

Product: Rubber tile

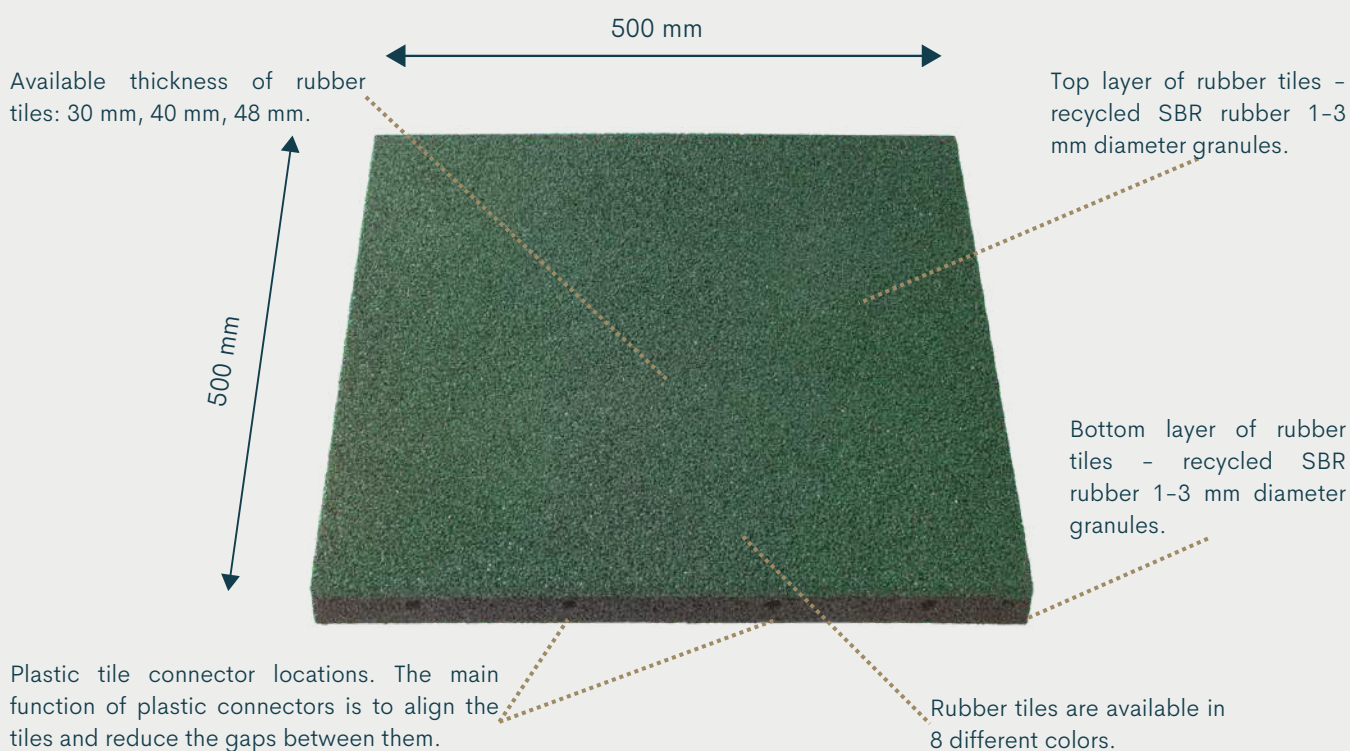

Usage area: Indoor/ outdoor

Weight/ m²: 21,6 kg (30mm)/ 24,4 kg (40mm)/ 28 kg (48mm)

Resistance: All climatic conditions

Compliance: EN 1177:2018 (Bureau Veritas)

SBR rubber granules are colored with a very fine synthetic inorganic iron oxide (Fe₂O₃) pigment. Inorganic synthetic pigments are characterized by pure tone, high dispersion and coloring ability (intensity), they are resistant to light and atmosphere.
